

# FOREWORD

# Welcome to the Keringa Angus Sixth Annual Bull Sale

Keringa Angus is excited to introduce this year's exceptional bull lineup, which boasts length, depth, width, superb structure, and outstanding temperament. A solid maternal background supports all of these attributes.

In 2024, we offer the most extensive selection of grandsons from the legendary Millah Murrah Paratrooper P15 outside Millah Murrah. This includes sons of the record-breaking Millah Murrah Rocketman R38, Millah Murrah Rembrandt R48, and walking sire Millah Murrah Paratrooper R127. We also present a great selection of alternate lines from favourites Millah Murrah Nugget N266, Millah Murrah Quixote Q96, Millah Murrah Nectar N334, Ascot Qualifier Q329, Landfall Nobleman N106, and new lines from Millah Murrah Rector R53 (Nectar son), Banquet Quarter Pounder Q252, and Millah Murrah J194.

Our focus is on breeding true-to-type modern Angus with exceptional phenotype. These bulls are raised on pasture for commercial resilience and will not disappoint. We use genomic technology to ensure all bulls are, at a minimum, sire-verified and dam-verified to all dams born after 2019. Genomics has enabled us to offer a much higher accuracy on the Estimated Breeding Values (EBVs) for younger bulls, which will limit data shifts in the future and give you more confidence in your investment.

Investing in Keringa bulls guarantees high-quality animals with superior genetics to improve your herd constantly and increase profitability.

Regards, Trent Walker

# **OFFERING 66 ANGUS BULLS**

50 17-19 MONTHS / 16 RISING 2YO

# BEEF FIELD-DAY TUESDAY 6<sup>TH</sup> FEB 2024 / 9AM-4PM

Free delivery within 250km.
All bulls freight assisted. Interfaced with AuctionPlus.

# SALE DATE 10TH FEBRUARY 2024

INSPECTION: TUESDAY 6TH FEBRUARY 2024

Contact: Trent Walker: 0429 965 167 Email: tawkeringa@gmail.com / www.keringa.com.au 1167 Boothby Rd Culburra SA 5266 f keringa angus

- **06 SELLING INFORMATION**
- **08** UNDERSTANDING THE TRATRANSTASMAN ANGUS CATTLE EVALUATION
- **09** UNDERSTANDING EBVS
- 10 LOTS FOR SALE

- **30** REFERENCE SIRES
- 35 BRINGING YOUR BULL HOME
- 37 DISCLAIMER AND PRIVACY INFORMATION

# **SELLING INFORMATION**

#### SALE DATE AND INSPECTION TIME

Selling will commence at 10am on Saturday the 10th of February 2024, Prior Inspection Tuesday 6th February 2024.

#### **CATERING**

- -Field-day Light refreshments and cool drinks available -Sale Day- Barista made coffee and Breakfast available pre-
- -Smoked Brisket Rolls post sale, please join us

#### **PRIOR INSPECTION**

Beef Week 2024 Tuesday 6th February 9am to 4pm. If you are unable to make the field day, please ring to organise an appointment for private inspection.

#### **SELLING SYSTEM**

Animals will be sold under normal auction conditions. The sale will also be interfaced with AuctionsPlus, enabling anyone not able to make the sale to bid with confidence. Successful purchasers are requested to give written instruction to the selling agents regarding transport after the sale. All lots will be sold GST exclusive, with GST to be added to the final bid price. Please see selling agents for a full list of terms and conditions.

#### **AUCTIONSPLUS**

The sale will be interface with AuctionsPlus so anyone not able to make the sale on the day can bid online. Please see www.auctionplus.com.au

#### **REGISTRATION**

Please see the selling agent to obtain a buyer's card. Ownership of the bulls will be transferred by the vendor with Angus Australia. Please provide accurate information so the bulls can be transferred correctly, your Angus Australia herd ID (if you have one), also your PIC number so bulls can be transferred on the NLIS database.

#### **ACCOMMODATION**

Accommodation is available in Coonalpyn, Tintinara.

## PHYSICAL EXAMINATION OF THE BULLS

All bulls have been thoroughly checked and will only be offered if deemed to be fit for service. All bulls structurally assessed by Jim Green. Bulls have been semen tested palpated of scrotal contents by Nationwide AB. Bulls have all been scanned for EMA, rib and rump fat and IMF. Data available on request.

#### **PHONE BIDDING**

Phone service is available at the sale area, but sometimes not of great quality, so it is suggested bids be placed with agents prior to the sale.

#### **VISITORS ENTER THE PENS AT THEIR OWN RISK**

#### NO CHILDREN MUST ENTER THE PENS

People entering the yards are at risk of injury. Be alert, especially if bulls are fighting, if a bull tries to be playful please do not respond by touching him on the head. Please alert staff to any issues. Leave the pen if you must and let the animals calm down. Although we work very hard on temperament, the pressure of the inspection and sale may cause some bulls to become agitated. If you require assistance in the pens, please ask one of the selling agents for assistance.

#### **TEMPERAMENT AND HANDLING**

The Keringa herd takes pride in the docility of all our animals, all animals are assessed each time they come into the yards to ensure any animals not deemed suitable are culled. Understandably on sale day with the change in environment and more people around the odd animal may misbehave. Bulls have been handled with horses, utes, quad bikes, on foot and by dogs.

#### **MANAGEMENT**

Bulls are paddock weaned at 5-7 months of age in large contemporary groups. They ran in these groups, growing on pasture and sown crops until late 2023 when they were split into sale groups.

Since being split the bulls have run on lucerne-based pasture supplemented with oaten hay in preparation for sale.

#### **GENETIC CONDITIONS**

Bulls are free from all other listed Genetic Conditions by pedigree or testing.

#### **EBVS**

Please note EBV are from the January 2024 TACE run at Angus Australia.

#### **BULL HEALTH**

Keringa bulls are ready to go to their new homes and work. Bulls have been DNA tested for pesti-virus, all animals tested negative to being PI (Persistently Infected). Double vaccinated with Pestiguard, Vibrovac and & 7 in 1. Semen Tested. Keringa Herd is J-BAS 8.

#### **SEMEN RIGHTS**

All bulls sell with 80% semen marketing rights attached. Giving the purchaser a majority share in any semen sale but providing a link to the knowledge of the bulls from Keringa and potential marketing options. Should the purchaser wish to purchase 100% semen rights on a bull please contact the vendor at least 24 hours before the sale. Keringa retain the right to collect up to 500 straws of semen from any bull in the sale, at the vendor's expense and the purchaser's convenience.

#### **DELIVERY**

All bulls come with free delivery within a 250km radius of Tulara Downs. Other bulls will be freight assisted.

## **HEALTH AND SAFETY OF VISITORS**

All bulls are thoroughly screened for temperament but with the nature of cattle there is always a risk on the day as under different environments some bulls may become agitated.

#### WARRANTY

The vendor Warrants that: Bulls are capable of natural service within 12 months of sale. Bulls are structurally sound for working. Resolution: The vendor will either provide a satisfactory replacement or provide a credit for the following Keringa Sale (less salvage value and associated cost in vendor taking delivery). In the case that a purchaser claims a bull is infertile, the purchaser must submit a veterinary report stating the reason for infertility. Keringa does not cover sickness or injury that may have occurred after delivery of the bull. We highly recommend that you insure your bulls for these issues. If a legitimate issue does arise please contact Trent Walker on 0429 965 167 and we will do our best to find a resolution and make sure your cows get in calf.

#### What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

#### What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

#### Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

# Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- · the breed average EBV
- · the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

#### **Considering Accuracy**

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the FBV

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

#### **Description of TACE EBVs**

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

ONDENDIAMENTO ED INTALED DILEEDING TALGEG LEDTO	UNDERSTANDING	<b>ESTIMATED</b>	<b>BREEDING</b>	<b>VALUES</b>	(EBVS)
---	---------------	------------------	-----------------	---------------	--------

		710	ANDERSTANDING ESTIMATED DREEDING ANTOES (	FDA91
irth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease/Birth	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
alving	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
ű	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
_	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
Growth	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
U	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Fert	ss	cm	Genetic differences between animals in scrotal circumference at 400 days of age. $ \\$	Higher EBVs indicate larger scrotal circumference.
	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
Carcase	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
Carc	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the $12/13$ th rlb site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/ Temp.	NFI-F	kg/ day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
Te.	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
ā	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
St	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock). $$	Lower EBVs indicate a lower score.
	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
Selection Index	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.  The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

VERMONT LOWAN E356 PV

Final Nugget son comes from one of our top donor cows, Lowan M34. This bull has incredible potential, and we've already retained his full brother for mating in autumn and spring. We're confident in this breeding line, as we flushed the full sister of T23 in 2023 when she was just a maiden heifer. With positive CE and a BWT pf +1.9, this bull is perfect for use on heifers.

Description:

T27 is the first son to be sold, and he was sired by Banquet Quarter Pounder Q252. Quarter Pounder was bought in partnership with Millah Murrah and Alpine Angus for a record price of \$60,000 in 2020. ABS Australia has the distribution rights for his semen. T27 is an excellent bull, and he comes from one of our favorite dams, Princess M85. He is also a maternal brother to the dam of Lot 9. Expect to get quality females from this bull, which has an IMF of +4.5 as a bonus.

A powerful bull with growth estimated breeding values (EBVs) in the top 5% is leading the 17-19 month group in this year's sale. He is the first son of the record-breaking Millah Murrah Rocketman R38, who sold for \$280,000. This bull combines Paratrooper, Nector, and Liberty bloodlines, making him very similar to Lot 15. Although the heifers' first calf has a higher birth weight, the bull's calving ease data is satisfactory for heifers if you wish to use him that way.

········· ♀ KERINGA ELECTRA K55 sv

T117 is an impressive bull with a long body and a large top. His dam is a powerful Liberty daughter from our founding Melody female line. The bull has bomb-proof CE EBVS and very handy carcass data. It's worth noting that T117's maternal brothers have sold for \$14,000 and \$17,000, respectively. The upcoming sale in 2024 will feature the most extensive offering of Rocketman Sons outside Millah Murrah.

........... 🗣 MILLAH MURRAH BRENDA N8 🗠

SIRE: MILLAH MURRAH QUIXOTE Q96

DAM: KERINGA FLOWER R168sv

Long-bodied Quixote son with a little extra frame and a true sires outlook, Quixote sons offer a genetic variation from mainstream Angus bloodlines. Descending from the Millah Murrah flower G20 matriarch and the maternal strength of Brenda N8 and Spickler Blossom 0278 from Quixote, expect this bull to breed front paddock females and steers that weigh. He is another heifer's first calf; however, CE data would suggest he is best used over cows.

V KERINGA CHAMPAGNE P122 PV

Balanced is the perfect word to describe T150. He has been outstanding from a young age. His dam, Champagne R121, is a long-bodied Nectar daughter with a promising future. His full brother was sold at our 2022 sale for \$25,000, and his maternal brothers were the top performers at our 2023 sale, selling for \$22,000 to Marcollet Pastoral and two others for \$17,000 each. He was at the top of his contemporaries in both ADG of 1.34kg/day and an EMA scan of 101 just shy of 16 months.

# BRINGING YOUR NEW BULL HOME

WHEN PURCHASING A BULL, CARE AND HANDLING AFTER THE SALE CAN BE AS IMPORTANT AS THE PURCHASE ITSELF.

LOOKING AFTER YOUR BULL WELL DURING THE INITIAL STAGES OF HIS WORKING LIFE MAY ENSURE LONGEVITY

AND SUCCESS WITHIN YOUR BREEDING HERD.

# **PURCHASE**

Temperament is an important characteristic when selecting a bull. Selecting a bull that may be flighty or aggressive will make life difficult for you each time he is handled. Note which bulls continually push to the centre of a mob, run around, or are unreasonably nervous, aggressive or excited.

At the sale, note any changes of temperament by individual bulls. Some bulls that are quiet in the yard or paddock may not like the pressure and noise of the auction and become excited. Others that were excited beforehand get much worse in the sale ring and can really perform. Use the yard or paddock behaviour as a guide, rather than the temperament shown in the ring.

# **DELIVERY**

When transporting your new bull insurance against loss in transit, accidental loss of use, or infertility, is sometimes provided by vendors. Where it is not, it is worth considering. After purchase tips:

- When purchasing, ask which health treatments he has received.
- Treat and handle him quietly at all times no dogs, no buzzers. Talk to him and give him time and room to make up his mind.
- With more than one bull from different origins, you must be able to separate them on the truck.
- Make sure that the truck floor is covered to prevent bulls from slipping. Sand, sawdust or a floor grid will prevent bulls from being damaged by going down in transit.
- If you can arrange it, put a few quiet cows or steers on the truck with the bull. Let them down into a yard with the bulls for a while before loading and after unloading.
- Unload and reload during the trip as little as possible If necessary, rest with water and feed. Treat bulls kindly your impatience or nervousness is easily transmitted to an animal unfamiliar to you and unsure of his environment.

# IF YOU USE A PROFESSIONAL CARRIER:

 Make sure the carrier knows which bulls can be mixed together.

- Discuss with the carrier, resting procedures for long trips, expected delivery time, truck condition and quiet handling.
- Give ear tag and brand numbers to the carrier and make sure you have the carrier's phone number.
- If buying bulls from interstate, organise any necessary health tests before leaving and work out if any other requirements must be met before cattle can come into another State.

When buying bulls from far away, you may often have to fit in with other delivery arrangements to reduce cost. You should make it clear how you want your bulls handled.

# ARRIVAL

When the bull or bulls arrive home, unload them at the yards into a group of house cows, steers or herd cows. Never jump them from the back of a truck directly into a paddock—it may be the last time you see them. Bulls from different origins should be put into separate yards with other cattle for company.

Provide hay and water, then leave them alone until the next morning .

The next day, bulls should receive routine health treatments. If they have not been treated before, all bulls should be vaccinated with:

- 5-in-1 vaccine;
- · vibriosis vaccine;
- leptospirosis vaccine (if in areas like the Hunter where leptospirosis exists);
- three-day sickness vaccine (if in areas where this sickness can cause problems).

Give particular attention to preventing new bulls bringing vibriosis into a herd. Vibriosis, a sexually transmitted disease, causes infertility and abortions and is most commonly introduced to a clean herd by an infected bull. These bulls show no signs of the illness. Vaccinated bulls are free from vibriosis, so vaccinating bulls against the disease should be a routine practice.

Vaccination involves two injections, 4–6 weeks apart, at the time of introduction, and then a booster shot every year. Complete the vaccinations 4 weeks before joining.

DURING MATING

ARRIVAL

MATING NEW YOUNG BULLS
NORTHERN AUSTRALIA

Consult with your veterinarian and draw up a policy for treating bulls on arrival and then annually. Bulls should be drenched to prevent introducing worms and, if necessary, should be treated for lice.

Plan to give follow-up vaccinations 4–6 weeks later. Leave the bulls in the yards for the next day or two on feed and water to allow them to settle down with other stock for company. A bull's behaviour will decide how quickly he can be moved out to paddocks.

# MATING NEW YOUNG BULLS

Newly purchased young bulls should not be placed with older herd bulls for multiple-sire joining. The older, dominant bull will not allow the young bulls to work, and will knock them around while keeping them away from the cows.

Use new bulls in either single-sire groups or with young bulls their own age. If a number of young bulls are to be used together, run them together for a few weeks before joining starts. They sort out their pecking order quickly and have few problems later.

When the young bulls are working, inspect them regularly and closely.

# MATING NEW YOUNG BULLS

Older working bulls also need special care and attention before mating starts. They should be tested or checked every year for physical soundness, testicle tone, and serving capacity or ability.

All bulls to be used must be free-moving, active and in good condition. Working bulls may need supplementary feeding before the joining season to bring up condition.

# DURING MATING

- Check bulls at least twice each week for the first 2 months. Get up close to them and watch each bull walk; check for swellings around the sheath and for lameness.
- Have a spare bull or bulls available to replace any that break down. Replace any suspect bull immediately.
- Rotate bulls in single-sire groups to make sure that any bull infertility is covered. Single-sire joining works well but it has risks. The bulls must be checked regularly and carefully, or the bulls should be rotated every one or two cycles.

Bulls are a large investment for breeding herds and they have a major effect on herd fertility. A little time and attention to make sure they are fit, free from disease and actively working is well worthwhile.

# **NORTHERN AUSTRALIA**

Although the Angus breed originated in a cooler climate, they can adapt to subtropical regions with many straight-bred and cross bred producers finding success in Northern Australia. Some of the following information may also be helpful for new bulls located in more temperate climates.

#### ADAPTATION

They key to Northern success for Angus is that cattle introduced from the Southern regions of Australia be allowed to adapt to their new environment before commencing their working life. If possible, a break of 3 months is advisable before you set your bull to work.

## PURCHASE IN COOLER MONTHS

Ensure your bulls are in good condition before they do commence their working life. The cooler months are an ideal time to purchase and introduce Angus cattle, allowing them plenty of time to acclimatise.

#### CHANGE OF FEED SOURCE

When inducting Angus cattle into your herd consider their source of feed. Have you taken an animal which has been supplemented on grain straight to a dry pasture? Animals should be gradually changed over to their new feed to ensure they do not lose condition. This may involve using supplements which could include dry lick/urea blocks.

## MANAGING CATTLE TICKS

For ticky areas, bulls should be vaccinated prior to transport and given another booster afterwards. Remember males are more susceptible to ticks than females.

# How to Register and Bid on AuctionsPlus

- Go to www.auctionsplus.com.au to register at least 48 hours before the sale.
- Fill in buyer details and once completed go back to Dashboard.
- Select "**Sign Up**" in the top right hand corner.
- Complete buyer induction module (approx. 30 minutes).
- Fill out your name, mobile number, email address and create a password.
- AuctionsPlus will email you to let you know that your account has been approved.
- Go to your emails and confirm the account.
- Log in on sale day and connect to auction.
- Return to AuctionsPlus and log in.
- Bid using the two-step process unlock the bid button and bid at that price.
- Select "Dashboard" and then select "Request Approval to Buy".
- If you are successful, the selling agent will contact you post sale to organise delivery and payment.

# DISCLAIMER AND PRIVACY INFORMATION

#### **Attention Buyer**

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

#### **Parent Verification Suffixes**

The animals listed within this catalogue including its pedigree, are displaying a Parent Verification Suffix which indicates the DNA parent verification status that has been conducted on the animal. The Parent Verification Suffixes that will appear at the end of each animal's name.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV: both parents have been verified by DNA.

SV: the sire has been verified by DNA.

DV: the dam has been verified by DNA.

#: DNA verification has not been conducted.

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

#### **Privacy Information**

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information

# BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA
