Welcome to Leawood Angus

We invite fellow cattle breeders to attend our 2024 Autumn bull sale starting at 1:00pm on Monday 8th of April.

We have catalogued an outstanding and consistent line up of 49 bulls for your viewing. Here at Leawood, Longevity and structural soundness traits are so important when we are selecting genetics to add to our herd. We must be fully confident in our progeny to be able to perform off grass and thrive in our commercial based operations. These breeding principles give our clients better value for money when purchasing Leawood bulls. We have numerous clients with bulls still out working that are 8 to 10 years old.

This year once again, all sale bulls have been scanned for fats and EMA, along with a crush side semen morphology assessment. Registered bulls have been Genomics tested and sire verified. This year we have added in the registered bulls EBVs to a summary sheet with an explanation table you will find on pages 18-19. We offer free delivery on sale bulls throughout Victoria.

This year's Autumn draft is the largest spread of 16 sires we have had at a sale, which shows the consistency of the Leawood female herd to be able to continue producing such an even draft of bulls yet again.

New Zealand sire, Brookwood Titan J32, is still making his mark on our herd with a golden pedigree cross of Braveheart of Stern and Turihaua Crumble Y167. Titan progeny have good ease of calving traits and huge early growth, and we have found he is breeding beautifully correct females, as well as cracking soft skinned bulls. Other standout sires of the draft are Leawood Steaks N297, Turiroa Ragnar P224 whose progeny will catch your eye in all sale pens with the extra depth and thickness displayed throughout.

2 new standout Leawood sires that we used over heifers backing up after AI is Leawood Ryder R453 and Leawood Razor R347. Both bulls are ticking a lot of boxes. They haven't got a huge impact on this sale draft of bulls, due to an outstanding AI conception rate. Both bulls are worth keeping an eye out for in many more sales to come.

If you're looking for a bit more size and frame, we would recommend Leawood Paddy P432, Leawood Pirate P391 and Leawood Express L581's progeny. These 3 bulls have tremendous longevity and are very structurally correct.

Following the sale of the bulls will be 15 HBR PTIC Spring Cows with calves at foot followed by 25 commercial PTIC Spring Cows with calves at foot, Females will be penned in approximately numbers of 4-8.

Please feel free to contact us should you have any queries.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

	Trait	Unit	Description	Interpretation
Calving Ease	GL	Days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	Kgs	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	Kgs	weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	Kgs	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	Kgs	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	Kgs	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	Kgs	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
	EMA	CM2	muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	RIB	MM	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
Carcass	RUMP	MM	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

EBVS ACCURACY value is published with each EBV and is usually displayed as a percentage value immediately below the EBV. EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.
