WELCOME TO WEERAN ANGUS

Dear Cattle Breeders

The season across Western Victoria has been very challenging for so many, with everybody needing to put different strategies in place to get through. For us we used containment feeding for the first time, and we are very happy with the results. The ewe flock were all put into containment paddocks with a supplementary feeding regime that was well managed by the Weeran Team. Gibberellic acid was sprayed on the paddocks to trigger extra growth which grew a small wedge of feed for the ewes to now go onto following lamb marking. A large number of cows were placed on the back flats to rest a large area of the property. Bringing in feed has been a constant through the period, but the livestock are in good health following the driest two seasons we have experienced in our time farming at Byaduk. Going forward we will tweak our containment feeding, but we have learnt a lot, and it will become a practice we will do in the future.

53 sales coming up for the Weeran Angus Team! We are excited with our new reference sires which were introduced into the autumn sale, along with our two new sires for this sale being Sterling Pacific and Waitara Quidditch.

With the new Neogen Igenity Genomic DNA test for the hard to measure traits, and important data in addition to the Breedplan ebv's, it is exciting to be able to select on more relevant market information for our breeding program with the sires we use. It has proven with 6,300 tests, that Igenity data correlates 90% accuracy. In particular interest is the tenderness, marbling and stayability results. Dick Whale is very involved in this new ground breaking genomic data, and is something we at Weeran Angus are using to ensure we are producing a product that meets the current market demand – an excellent eating experience, and females that will have longevity in your herd!

Our herd focus is unwavering . . . with a focus on calving ease and carcase with as much growth and maternal traits that we can make use of in our own environment. Adding outstanding temperament, goes a long way for increased production and work safety. This catalogue is packed with calving ease, with 48 heifer bulls.

A catalogue full of Sire Verified bulls is something we are very proud of. This means the bulls we are selling you are 100% guaranteed to be the sire we say they are! To achieve this, extensive genomic testing is undertaken to make our data accurate.

Our bull sale will be held on property and online. Please note we will be selling online with AuctionsPlus for this sale. All bulls will be on display and our auction will be run by video in our Woolshed beside the display yards.

We invite you to come and inspect the bulls at our Bull Inspection Day on Tuesday 27th August at 10am – 4pm. We look forward to welcoming you to our 53rd On Property Bull Sale on Tuesday 3rd September.

Kind regards
Alec & Jo Moore

(H) HEIFER BULL SELECTION CRITERIA

There are 48 heifer bulls in this catalogue. Heifer bull recommendations are the combination of Calving Ease EBV's, Birthweight EBV, pedigree history and actual birthweight, which gives us confidence to recommend them for heifer matings!

It is not an exact science, but a recommendation!

DELIVERY REBATE

WE ARE MAKING CHANGES TO THE DELIVERY OF ALL SALE BULLS!

We would like to offer all purchasers a rebate of $100 per bull to organise pick up of their own bulls within two weeks. For those who don't organise their own transport, there will be a charge of $100 per bull up to 500 kms, for transport to be organised. It is our intention that all bulls will be delivered within two weeks.
We will organise loads to the same districts to make it cost effective.

ALL SALE BULLS COMPREHENSIVELY GENOMICALLY TESTED

SIRE ASSURED
BY ANGUS AUSTRALIA

HEALTH STATUS FOR ALL SALE BULLS

1. Semen Quality Tested
2. Drenched and 7 in 1 Vaccination
3. One Pestigard Vaccination and One Vibrovax Vaccination to all Sale Bulls
4. Two Vaccinations – Bovilis MH + IBR

SEMEN RIGHTS

Weeran retains semen rights on all sale bulls for use in our Weeran Herd. If required, Weeran will organise and collect semen at our expense and at your convenience.

GENETIC CONDITIONS

All sale bulls have been tested for known genetic conditions, and results are printed in the catalogue. For further information, please refer to Angus Australia website... www.angusaustralia.com.au

IBMS GTS GRADING

IBMS GENETIC TYPE SUMMARY (GTS)

All Weeran bulls have been assessed on the GTS Type/Structure system. All the bulls in the catalogue are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups.

DESCRIPTIVE TRAITS

Stature - Evaluation of bulls for frame size. A maturity pattern 25 is an average frame bull. This may be influenced by age of dam, particularly first calf heifers.

Capacity - Bull evaluation combines depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicate larger capacity.

Body Length - Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length. Muscle – Scores higher than 25 indicate above average muscle.

Doing Ability - Ability to lay fat relative to their peers under common management system.

Muscle Score - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.
Scores : 25 = C muscle 30 = C+ 35 = B- 40 = B 45 = B+

Sheath – To maximize a bulls effective servicing of cows the sheath needs to be 'tight' and parallel with the underline. The navel must not be too expressive.
Scores: 5 = Excellent: very tight, parallel with underline, very little navel.
4 = Very Good: tight, almost parallel with underline, slight navel.
3 = Acceptable: not so tight, angle increasing, some navel.
2 = Undesirable: pendulous, increased angle, navel very evident.
1 = Very Undesirable: very pendulous, too much angle, too much navel.

STRUCTURAL SOUNDNESS TRAITS

The system is aimed at being as simple as possible. All structural traits (front and rear feet, rear leg angle and pastern scores) are presented in the same format. A score of 5 is optimum. Scores of 4 or 6 represent a slight variation from ideal.

These animals would be acceptable in most breeding programs. Scores of 3 and 7 have a larger variation from ideal, but would be acceptable in most commercial herds, but seedstock producers should assess these animals carefully. Scores of 2 or 8 are low scoring and should be carefully evaluated prior to purchasing.

Bulls scoring outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal. Many thanks to Dick Whale for assessing all sale bulls. WEERAN GUARANTEES!

OVERALL GRADE - 7 excellent, 6 very good, 5 good, 4 average, 3 and below are not acceptable to be in sale.

Connamara P64 was selected for his outstanding data set and outcross pedigree which really packs a punch. He is an APR sire, so he will be hard to find in other HBR programs. For the commercial breeder he will give you a rare opportunity. His data is freakishly good for all traits and combined with our outstanding Joel and Hooper females we believe we have something very special. He has been used in 27 herds with 523 progeny.

Lawsons Momentous M518 is very well proven for dramatically improving eye muscle area and IMF ...you can put that in the bank it is fact not fiction. He has good temperament. Q85 adds calving ease plus body shape and capacity. We are very pleased with his progeny and we have used him across several joinings now. There is a lot to like about this sire.

Mainland was purchased in 2021 in syndication with Bull Oak Well & Mandayen Angus studs. He has an outstanding phenotype with faultless structure.... a real athlete. His data set is outstanding combining calving ease with a top 6% growth curve, top 2% scrotal and top 3% eye muscle area. Dick Whale has also had him tested genomically using the 10 trait ingenity beef profile system where he has excelled for Tenderness with a top score 10/10 along with very good results for Marbling 9/10 and Carcase Weight 9/10. He has been used in 10 herds with 378 progeny.

Waitara Quidditch was purchased in syndication with Twin Oaks, NZ. He is producing meaty, consistent, calving ease bulls. He is a square hipped, long bodied, free moving, thick butted son of GAR Phoenix, with an excellent temperament. His calves at Weeran all have eye appeal and he has bred very consistently.

ALL EBV'S IN CATALOGUE ARE FROM END OF JULY 2024 RUN!

Quambatook was a high selling son of Numurkah purchased at Dunoon Angus in the spring of 2021. He combines our mantra of calving ease & carcase with exceptional phenotype. A large framed bull with a very good growth curve, and feed efficient. His first progeny where sold in the Autumn, grading well and consitently which was reflected in the sale data. This is giving us a lot of confidence in using him.

Paratrooper set an Australian record when he was sold at Millah Murrah in their 2019 sale. Used in 327 herds with 6439 progeny. He ticks the boxes with his structure, phenotype and pedigree combined with a balanced EBV profile. GL in the top 4%, 200 and 400 day top 5%, CWT top 5%, and $A-L top 8%. Comments made from grading our Autumn U bulls and heifers earlier this year were that they had plenty of shape, good frame, nice muscle pattern with good growth.

R16 was purchased by Carcoola Pastoral. He is a power bull with high levels of docility and very feed efficient which has him indexing the house down. A bull with outstanding phenotype, and being by Sydgen Enhance and out of our Witherswood donor dam, it makes him a very desirable pedigree package.

ADDITIONAL REFERENCE SIRE INFORMATION CAN BE FOUND ON WWW.ANGUSAUSTRALIA.COM.AU

Recommendations for the introduction and management of your new bull:

1. **UPON ARRIVAL:**
    a) Ensure your new bulls socialise with a group of animals, (anything except other bulls) in the yards, when they arrive.
    b) Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd – see further information below).
        i. **This MUST be done with the empty females, for a period of 2 to 4 weeks.** Ideally the bull can then be rested for 6-8 weeks prior to joining.
        ii. **Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**
    c) Ideally bulls should be insured for their first year as standard.

2. **PRE-JOINING:**
    a) We recommend a breeding soundness examination (BSE), including structural assessment, testicular palpation, service ability testing and semen testing (essential in single sire matings). This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing infertile bulls from the joining group. If bulls are not service tested it is essential that you observe the bulls serve in the first week of joining.
        i. These bulls will be given a risk rating and mating potential which will influence joining bull teams.
    b) **Keep vaccinations up to date;** Vibrovax, Leptospirosis 7-in-1, Pestigard and an annual drench, 4-6 weeks prior to joining.

3. **JOINING** - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:
    a) **PROTECT a new bull by not over-joining, 30 females per virgin bull maximum.**
    b) **Recommended to multi-sire join.**
        i. Ideally mixing bulls of different age groups, experience levels and risk ratings.
    c) **It is recommended, IF single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**

“Most new bull fertility issues develop or are acquired during the joining period, rather than being pre-existing problems." This means that bull observation during the joining period is essential!

ONCE THE JOINING PROGRAM IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP.

Your new bulls need to be run in mobs that are easily monitored, keep them close to promote observation, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This involves looking for,

1. The bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately. Sound bulls should serve every 1 to 2 mounts.
2. Lameness.
3. Evidence of penile or preputial swelling or inflammation.
4. Signs of ill health, lethargy, etc.
5. Estimate the number of females cycling, (for every 20 females, one cycles each day at the commencement of joining). After three weeks of joining, there should only be one cow cycling every three days in 20 females.

4. **POST-JOINING:**
    a. **Annual breeding soundness evaluation is a non-negotiable procedure.**
    b. Good management of bulls is a year-round procedure.
        i. Keep bulls in working body condition – they should be in body condition score 3/5 at the start of mating, which will involve removing weight following the joining period.
        ii. Manage bulls in groups of joining teams to establish stable social hierarchies and minimise bull fighting.

- ✓ Bulls need to be removed from the cows at the same time, to help create their bull mobs. This will limit the number of potential injuries by reducing the number of bull interactions.
- ✓ Bull paddock management is very important to minimise injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction. Paddocks will require co-grazing with sheep, or crash-grazing by other mobs to manage feed quality and quantity on offer for the bulls.
- ✓ The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.
- ✓ Early pregnancy testing is essential for good female management and detection of failures. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring again in the future.

PENILE INFECTIONS IN BULLS – "Balanoposthitis":

Penile infections are a common disease in young bulls during their first joining season in any new herd. Mitigating the risk of this disease as outlined above is essential to reduce the number of breakdowns and optimise bull cost per calf.

These infections are caused by a range of bacterial, viral, and other organisms ("pathogens"). The genital form of infectious bovine rhinotracheitis (IBR; herpes virus) is commonly implicated. The issue is that any given property has its own population of reproductive tract pathogens and if the new bulls make their first contact with these pathogens at the time of high workload (such as joining) they are at a high risk of developing a penile injury.

These injuries typically involve a reddened inflamed penis, developing to ulceration and pustules. Some bulls will stop serving due to pain (will continue to mount, but not serve), but other high libido bulls will continue to serve and create significant inflammation commonly leading to preputial tears, abscesses and prolapses. These are often perceived to be a "broken penis", and **IF treated promptly may regain normal function!**

Treatment involves prompt removal of the affected bull from the joining mob, sexual rest (typically for the remainder of the joining) and treatment with antibiotics and anti-inflammatories. Preputial prolapses require surgical reduction.

If undetected these injuries commonly cause a significant decrease in pregnancy rate and commonly result in permanent infertility in the bull. **Observation and intervention are essential!**

Prevention of this condition is best achieved as outlined above, by deliberate pre-exposure of new bulls to a small number of females (low workload) well before the joining so that they are exposed and can develop immunity to the herds' pathogens prior to the high workload of the joining period.

Positive fertility outcomes are a significant driver of profitability in beef breeding enterprises, but this requires informed and active management!

HVC Production & Breeding.

ANGUS AUSTRALIA EBV'S

BIRTH			
Calving Ease Direct	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Calving Ease Daughters	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
Gestation Length	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
Birth Weight	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
200 Day Growth	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
400 Day Weight	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day Weight	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
Mature Cow Weight	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
Days to Calving	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
Scrotal Size	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
Carcase Weight	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
Eye Muscle Area	cm^2	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
Rump Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
Retail Beef Yield	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
Intramuscular Fat	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
FEED EFFICIENCY			
Net Feed Intake (Feedlot)	kg/ day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

Very nice growth ebv's in this son of P64. A decent set of coconuts under him at 43cm, and a scrotal ebv in the top 21% to back it up. Top 13% EMA with good indexing. Good temperament, and a high scoring Grade 6 from Dick Whale. Used in the Weeran program!

Bronc has proven himself time and time again, topping sales, and is still going strong! An impressive pedigree tree, combining Witherswood, Baldridge, and Weeran Joel! Plenty of power and grunt in this young gun, with all three growth ebv's in the top 1% for the breed with a huge carcase weight also in the top 1% and add to this very good indexing. He has a lot of presence about him, which is typical Bronc! Big, powerful, lots of depth with a very good muscle pattern and very quiet. His dam has had two male calves, both reaching sale quality. A top grading 6! Used at Weeran.

Sire Robin Hood is from a Witherswood/Beastmode ET flush and purchased by Murndal Pastoral. Grand dam Witherswood K116 has 39 progeny and has many runs on the board at Weeran. T772 has a fantastic data profile with calving ease, growth, docility, EMA, retail beef yield with exceptional indexing. EMA is the equal second top ebv in the catalogue. T772 has been used in the Weeran program, and only taken out of the heifers on 2.7.24

Coolana Vicky M136 has had two male calves and both reaching bull sales. T806 is a Beastmode and Witherswood Lowan K0116 grandson. A very nice data profile here across almost every ebv. Calving ease, growth, milk, docility, EMA, retail beef yield, IMF, structure and indexing. A very quiet bull, grading a 6 in the GTS scoring. Used heavily in the Weeran program and taken out of heifers on 21/7/24.

One of the outstanding bulls by Connamara P64 and out of a first calf heifer. T305 was used in the Weeran program for joining heifers in both the Autumn and Spring and came out of the heifers on 21/7/24. A fantastic growth curve, and an excellent dataset. Growth ebv's all in the top 4%, carcase weight top 2%, with excellent NFI and Indexing. A nice frame, good laid in shoulder and ideal for heifer joinings. A top grade 6 on the GTS grading.

Buyer ..... Price $ .....

T529 is a standout bull, and has good depth of body, combined with a good muscle pattern and capacity. He ticks a lot of boxes with his data profile. Calving ease, growth, milk, scrotal, carcase weight, IMF and great indexing. His IMF is in the top 5% for the breed and at 4.9 he is the equal second top IMF bull in this sale. GTS grade 6 from Dick Whale. Used in the Weeran program!

Now this is extraordinary calving ease! You will sleep well at night while the calves will be popping out. A lot of shape in this young gun by P64 and out of a dam which combines both Joel and Hooper in the pedigree, being two well proven sires at Weeran. An amazing growth curve, with IMF in the top 8%. A top grading 6. Used in the Weeran program!

Look at the data profile and look at the bold numbers! Weeran Upgrade by Q85 and out of R29, an Exclusive dam, has a great set of figures. Calving Ease Daughters, excellent growth across 200, 400 and 600, with excellent carcase weight. EMA is off the chart and the highest in the sale, with retail beef yield being top 6%.All this is teamed with very good indexing.

U166 has terrific capacity with a beautiful muscle pattern. He is a soft easy doing bull with a tight sheath and good temperament. A Calving ease sire, with growth and a very good carcase weight, with positive fat. His mature cow weight is lower than the 400 day weight which is good for cow efficiency. There is a lot to like about this Quidditch son.

R18 has produced a powerful son with good capacity and muscle definition. A good set of canon balls and SS ebv top 12%. Very growthy across 200, 400 and 600 day growth ebv's, and feed efficiency top 2% for the breed. His mature cow weight is under the 400 day, which tells you his females will be moderate in size and will have a lower feed requirement. Very handy in tough seasons.
