PAXTON STUD

7TH TWILIGHT ON PROPERTY SALE

PAXTON POLL DORSET AND WHITE SUFFOLK STUD

Wednesday, 25th September 2024 at 4:00pm
"Broadview" 942 Broadview Road, Western Flat

PAXTON STUD

Martin and Kirsty Harvey welcome you to their seventh annual twilight on property sale of Paxton White Suffolk and Poll Dorset rams.

The Paxton Stud has been breeding Poll Dorset sheep for over 40 years, with the stud starting on Allendale bloodlines.

White Suffolks have been bred since the beginning of the breed over 30 years ago, using an infusion of Allendale Suffolk over Paxton Poll Dorset ewes.

The Paxton Stud prides itself on structural soundness, high growth, well-muscled, easy care paddock reared rams.

At the conclusion of the sale we invite you to join us for refreshments.

Rams will be penned by 2.00pm with the sale commencing at 4.00pm.

Paxton Stud have MN2 vaccinated status in the OJD Market Assurance Plan (S396) and is Ovine Brucellosis Accredited (Flock no. 470)

Robin Steen P: 0428 838 195
Ray Jaensch P: 0439 870 682

We offer a rebate of 3% to outside agents introduced in writing 24 hours prior to sale. No delivery will be permitted before the end of the sale unless by prior arrangement.

Regulin improves the reproductive performance of sheep.
It's that simple.

Fewer dry ewes, more twins and a tighter lambing window all add up to more lambs. **20% more.***

If you join early and your ewes are in good condition, Regulin can improve your production and profits this year.

REGULIN[®]
MORE LAMBS WHEN YOU WANT THEM

If not this year, when?

*Average increase in paddock trials. Individual results may vary. Works in all breeds of sheep. Regulin is licenced for use in ewes and rams in Australia by Ceva Animal Health Pty Ltd, 11 Moores Road, Glenorie NSW 2157 ACN 002 692 426

*Agriculture
is woven through*
OUR DNA

Our people have a deep knowledge of agriculture right across the supply chain, and with many being from the land, they don't just understand farming, they live and breathe it.

LAMB EATING QUALITY (LEQ)

The LEQ index is for a prime lamb operation where terminal sires are joined to ewes of a Merino/maternal breed or cross in high rainfall and/or high input management systems where internal parasites may cause significant economic losses. Producers who select this index are interested in improving the eating quality of their lambs to a greater degree than is possible with the TCP index. Growth and carcass traits will still improve, and inclusion of worm egg count will aid in control of internal parasites.

Typical trait changes for the LEQ index include:

- increasing post weaning weight
- increasing eye muscle depth
- maintaining/small reduction in carcass fat
- increasing dressing percentage
- increasing lean meat yield
- large improvement in eating quality
- increasing resistance to worms.

Sheep with better eating quality will have higher ASBV's for intramuscular fat (more marbling) and lower ASBV's for shear force (better tenderness).

Understanding LAMBPLAN ASBVs

Rams with lower ASBVs for birth weight (BWT) produce lambs with lower birth weight. Both low (lamb survival) and high (lambling difficulties) birth weights should be avoided.

Rams with more positive ASBVs for post weaning weight (PWT) produce lambs that grow quicker and reach target weights in a shorter time. This ram will produce lambs that are, on average, 3kg heavier at post weaning age (7.5 months) than a ram with an ASBV of 0.

Worm egg count (WEC) ASBVs estimate an animals genetic potential for worm burdens. Lower WEC ASBVs are desirable. This ram will, on average, sire progeny that will have 5% fewer eggs/gram than a ram with an ASBV of 0.

Trait	BWT (kg)	WWT (kg)	PWT (kg)	PFAT (mm)	PEMD (mm)	WEC (%)	INDEX
ASBV	0.3	4	6.0	-1.5	1.0	-10	150
Acc	43	63	71	59	69	37	

Rams with a more positive ASBV for weaning weight (WWT) will, on average, produce lambs that grow quicker to weaning. This ram will produce lambs that are 2kg heavier than a ram with a 0 ASBV for WWT.

Rams with a more negative ASBV for post weaning fat (PFAT) will produce lambs that are leaner, at the same weight. This ram will produce lambs that are, on average, 0.75mm leaner at the GR site when compared to a ram with a FAT ASBV of 0.

Rams with more positive ASBVs for post weaning eye muscle depth (PEMD) produce lambs that have more muscle, independent of weight, and a higher lean meat yield. This ram will produce lambs that have, on average, a 0.5mm deeper eye muscle than a ram with a 0 EMD ASBV.

An index is a guide to the value of a ram for a particular market. Rams with higher indexes will produce lambs that are more suited to that particular market target. It is important to understand what market the index applies to before using an index.

- An ASBV of 0 is the average of the 1990 drop. It is important to compare ASBVs against current industry average.
- *Note: A useful rule of thumb for converting ram ASBVs into lamb production differences is to simply halve the ASBV (as rams contribute half the genetics of the lamb).*
- *Accuracy* - published as a percentage, is a reflection of the amount of effective information that is available to calculate the ASBV. All ASBVs are now published with accuracies. The higher the percentage, the closer the ASBV is to the true breeding value of the animal. Breeding values without accuracies are Flock Breeding Values (FBVs) and can only be compared within the flock.
- MLA acknowledges the contributions of the Australian Government and AWI in the development of this publication.

Terminal Carcass Production (TCP) index

Replacement for Carcass Plus

Key points

- ✔ Carcass Plus has been an important index for the sheepmeat industry but it has been found to have a negative impact on eating quality. Because of this and the industry's focus on delivering high eating quality outcomes for consumers, the index will be retired in March 2020.
- ✔ Carcass Plus will be replaced with the Terminal Carcass Production Index. To assist in the transition between indexes both Carcass Plus and Terminal Carcass Production will be available for the 2019 ram buying season.
- ✔ The Terminal Carcass Production (TCP) index will give similar improvements in growth and lean meat yield as Carcass Plus while also maintaining eating quality.

What is the new TCP index?

Indexes help producers select animals for use within a breeding program when there are a range of traits of economic or functional importance. This ensures that genetic gain in one trait is not made in isolation from other traits. Using indexes in ram purchasing decisions allow producers to make balanced genetic progress towards more profitable sheep.

The TCP index has been created to assist producers to achieve both gains in their major production traits, such as post-weaning weight and muscling, as well as ensuring consumer satisfaction from lamb is maintained through focusing on key eating quality traits such as shear force (tenderness) and intramuscular fat (marbling).

The TCP index is designed to suit a production system where:

- ✔ all progeny are terminal
- ✔ improving growth and muscle is of commercial benefit
- ✔ increasing lean meat yield has a positive financial impact
- ✔ a small degree of emphasis is included to maintain or improve eating quality.

Using the TCP index

The TCP index, unlike Carcass Plus, is on a scale that is aligned with other Sheep Genetics' indexes and is represented in economic terms with a unit increase in the index reflecting an additional dollar per ewe joined per year. To assist in comparing rams, Sheep Genetics recommends using a percentile band table as reference. The figure below, which is based on the percentile band table, highlights the TCP index value for significant percentiles for the 2018 drop animals.

Percentile band range graphic for TCP index 2018 drop animals

MANAGEMENT OF YOUR NEW RAM

Paxton Stud has done their best to present their annual draft of structurally sound rams for your selection.

All rams from "Broadview" are Brucellosis free, MN2 status and OJD vaccinated. Recently, they have been backlined, drenched with Triguard and 6 in 1 vaccinated.

All rams have received 3 pellets of Regulin immediately prior to sale.

We may suggest you insure your ram for the next 6 months. He will be more susceptible to injury, death and loss of use in this time than in any other period of his life.

Try and avoid putting new rams with old rams prior to mating.

From here on this management is your concern and will influence what his productive life will be in your breeding program.

We wish you every success with your purchase.
