Measured Performance Data

Australian Sheep Breeding Values (ASBV's)

YCFW	Yearling Clean Fleece Weight (kg)	Rams with higher YCFW ASBV's will produce progeny that will cut more wool.
YFD	Yearling Fibre Diameter (µm)	Rams with more negative YFD ASBV's will produce progeny which are finer.
YWT	Yearling Weight (kg)	Rams with more positive YWT ASBV's will produce progeny that grow quicker and are heavier at a certain age.
YFAT	Yearling Fat Depth (mm)	Rams with more positive YFAT ASBV's will produce progeny that have more subcutaneous fat, which improves reproduction rates and meat quality.
YEMD	Yearling Eye Muscle Depth (mm)	Rams with more positive YEMD ASBV's will produce progeny that have more muscle, independent of weight, and a higher lean meat yield.
EBWR	Early Breech Wrinkle score	Rams with more negative ASBV's will produce progeny with less breech wrinkle and, in general, less body wrinkle as well.

Selection Indexes

DP+	Dual Purpose Plus Index – ranks animals on their ability to produce merinos for dual purpose operations. The index is aimed at producers whose majority of seep income comes from sheep sales. It is for self-replacing merino flocks that do not keep their wethers and also join a portion of their ewes to terminal sires for lamb production.
MP+	Merino Production Plus Index – ranks animals on their ability to produce progeny for a fine wool operation that has significant surplus sheep sales. The index is aimed at producers whose sheep income is a balance of both wool and surplus sheep sales. It is for self-replacing merino flocks who do not keep their wethers to produce wool.
FP+	Fibre Production Plus Index – ranks animals on their ability to produce progeny for a fine wool operation that retains a proportion of wethers. The index is aimed at producers whose majority of income is from the wool clip with a focus on wool quality. There is a focus on improving fleece weight and fibre diameter and also includes staple strength, worm resistance and reproduction.
