

DUDDY ANGUS

25TH ANNUAL
BULL SALE

Friday 31st July 2026
1.00PM START

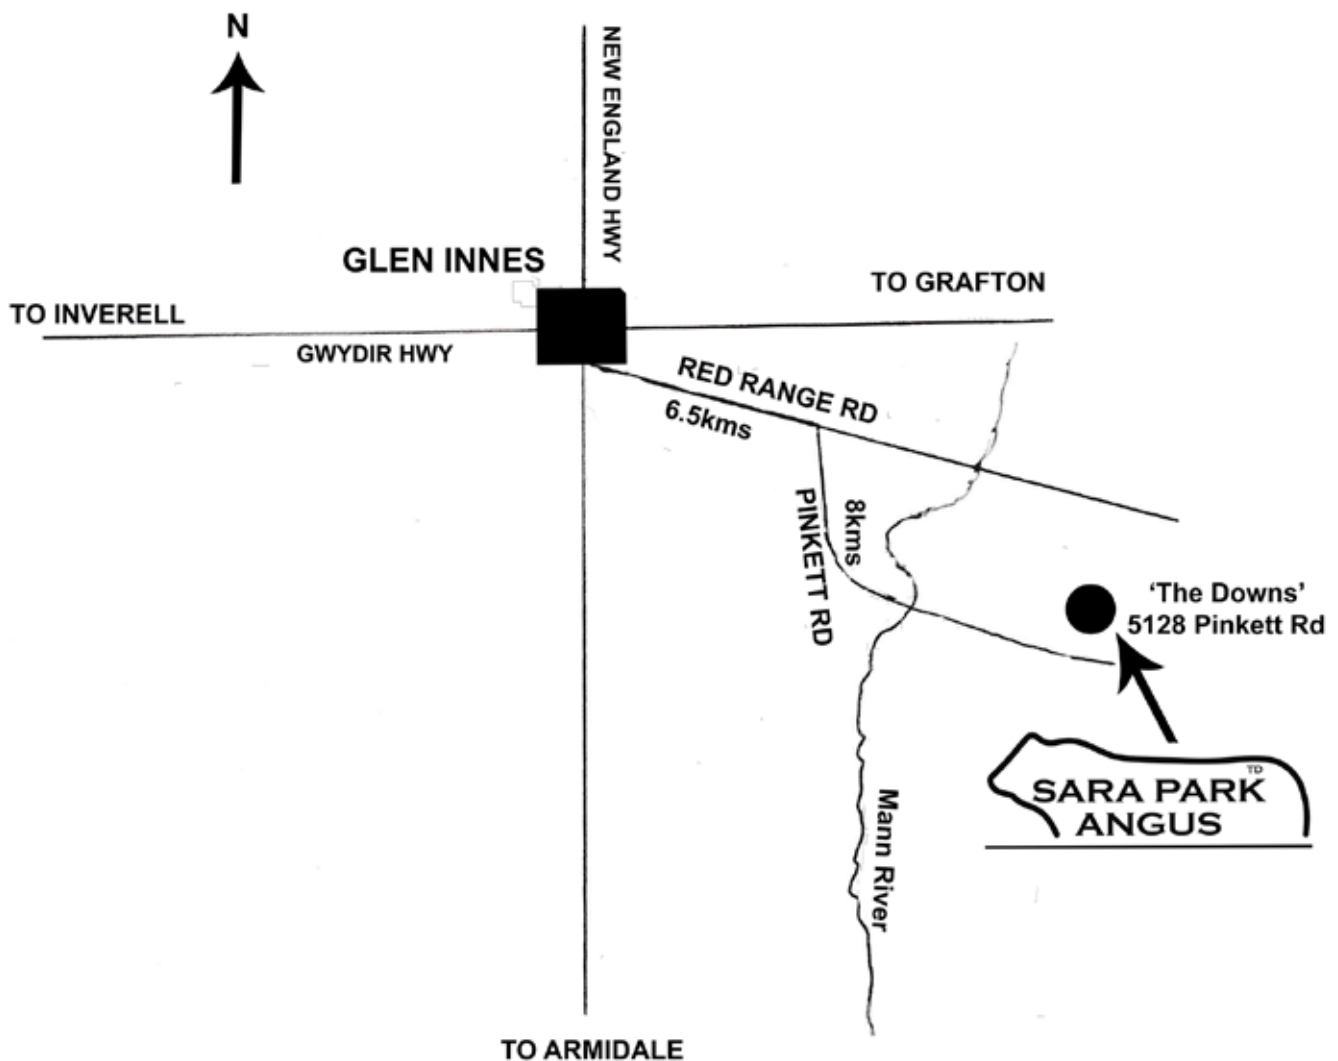

60 ANGUS BULLS

www.saraparkangus.com.au

DIRECTIONS TO SARA PARK

Located approx. 15km southeast of Glen Innes. Take the Red Range Road for 6.5km then turn right on to the Pinkett Road – continue for approximately 8km. Sara Park Angus ('The Downs') is on the left.

At the date of printing, Google Maps had the incorrect positioning for 5128 Pinkett Road (The Downs) but if you key in:

SARA PARK ANGUS, PINKETT ROAD, GLEN INNES Google Maps will bring you to us – keep an eye out for the sign on the left.

BUILT FOR PERFORMANCE ... BRED FOR SUCCESS

Lots 1-16, 31-44, 51-60

Lots 17-30, 45-50

25TH ANNUAL BULL SALE

1PM
FRIDAY 31ST JULY 2026

"The Downs", 5128 Pinkett Road, Glen Innes

FEATURING

60 2 Y.O Bulls

Vendors: Herb, Jeff & Robert Duddy

AUCTIONEER: ROBBIE BLOCH

WELCOME TO SARA PARK & DUDDY ANGUS ANNUAL BULL SALE

We're pleased to welcome everyone to our 2026 bull sale. It's been an extremely dry season across the region, and we know the challenges that brings to every producer. Even so, the cattle market has remained strong and positive, making it an ideal time to retire older bulls and introduce a new young bull into your herd. We're proud of the draft of bulls we're offering this year — a line-up that reflects the depth, consistency and performance we aim to deliver.

To our repeat buyers, thank you for your continued support and confidence in our program. And to new buyers joining us for the first time, we appreciate your interest and trust. Whether you've been with us for years or are just beginning with our genetics, we're grateful to have you here and look forward to seeing these bulls go on to add value in paddocks across the Country.

Thanks Herb, Jeff and Robert Duddy.

SALE INFORMATION

GST

GST is to be added to the purchase price at the fall of the auctioneer's hammer. You will be invoiced the purchase price plus GST.

REBATE

A 2% rebate will be offered to outside agents introducing buyers in writing 24 hours prior to the sale and settling within seven (7) days of invoicing.

FERTILITY

All sale bulls have passed a thorough fertility examination carried out by the Glen Innes Veterinary Hospital.

This examination includes semen viability, palpation of the reproductive organs and inspection of the penis and scrotum. Their scrotal circumference has also been measured.

INSPECTION

Bulls may be inspected prior to the Sale by contacting the vendor or selling agents.

Cattle will be available for inspection from 10am on sale day.

HANDLING

At Sara Park, we handle our cattle quietly and confidently, we always give our cattle respect, and our cattle respect us.

We use a 4-wheel motor bike and a ute, with controlled use of dogs. The bulls have not been handled with horses.

REFRESHMENTS

BBQ and light refreshments will be provided on sale day.

ADDITIONAL DATA

Raw data including scan measurement, weights and other information will be supplied on sale day.

INSURANCE

There is no vendor insurance on sale bulls. It will be the responsibility of the buyer to insure their purchases. Representatives from insurance companies will be in attendance and can offer insurance terms on sale bulls.

WARRANTY

The vendor warrants that:

1. Bulls are fertile and capable of natural service within 6 months of date of sale to the purchaser ("Warranty Period"); and
2. Bulls are of the parentage catalogued.

With the return of the bull the vendor will either:

1. Provide a satisfactory replacement; or
2. Provide a credit for use at the next Sara Park Angus bull sale equal to the purchase price (excluding any costs and expenses of the purchaser in taking delivery) minus salvage value:

Where:

1. The purchaser claims a bull is infertile, upon purchaser submitting a veterinary report after the expiration of the Warranty Period stating that the bull is infertile or incapable of natural service and a Statutory Declaration by the purchaser to the effect that the substance of the report is true and correct. The veterinarian must state that in his/her opinion there is no evidence that the bull has suffered any injury or illness during the Warranty Period which could have affected his breeding ability. The veterinary report and Statutory Declaration must be forwarded to the seller within 14 days of the Warranty Period expiring.
2. The purchaser claims the bull is not of the parentage catalogued, upon purchaser submitting a DNA test or blood test within the Warranty Period indicating that the animal is not of the stated parentage.

The purchaser acknowledges that the purchaser does not rely and it is unreasonable for the purchaser to rely on the skill or judgement of the seller as to whether the bulls supplied are reasonably fit for any purpose for which they are being acquired.

To the extent permitted by law all other conditions and warranties implied by law in respect of the state, quality and condition of the bulls which may apart from this clause be binding on the Seller are excluded.

The seller has no liability (including liability in negligence) to any person for any loss or damage consequential or otherwise suffered or incurred by that person arising from the sale of the bulls to the purchaser.

Please bring this catalogue to the sale to be sure of having one.

BULL PREPARATION

All sale bulls were weaned onto improved pasture. Due to the dry conditions recently, all bulls have been supplemented with barley, DDG pellets and barley straw.

Bulls present in good working order.

SALE BULL HEALTH

All sale bulls have been treated with and are up to date prior to the sale.

- Tick fever
- Vibrovax
- Pestivirus
- 7in1 + boosters
- Flukazole C
- Ivermectin/Moxidectin pour on

DELIVERY OF YOUR NEW BULL

To help your new bull or bulls settle into their new home as well as possible, we recommend the following:

All Sara Park bulls have been run in large mobs all their life, so they have had plenty of mates around, and have never been alone. It is a good idea to have some of your own cattle in the yard when your new bull or bulls arrive, a handful of steers or some PTIC cows or even an old bull, just something to keep them company, whilst they survey their new surroundings.

At Sara Park, we handle our cattle quietly and confidently, we always give our cattle respect, and our cattle respect us. We use a 4-wheel motorbike and a ute, with controlled use of dogs. **The bulls have not been handled with horses.** Handle your new bull or bulls quietly and with respect and he will settle into his new home well and will be easy to handle when the need arises. The bulls are in good joining condition at point of sale, but it is imperative to ensure good nutrition for the bull during the joining period. You should check the bulls regularly to see they are working especially in the early stages of joining when the majority of problems occur and early intervention can minimise the damage to the bull and to conception rates.

When joining is complete, bulls should be drenched and placed on good pasture to get back into first grade health without being allowed to get to over fat or too poor condition.

SALE DAY SAFETY

All the sale bulls have been screened for temperament and are quiet to handle under normal circumstances. However, there are inherent risks associated with cattle handling. **Visitors enter the cattle pens at their own risk. Children must not enter the yards.**

People entering the yards are at risk of injury. Be especially alert for bulls fighting and if one is playful with you, do not respond by patting his head. What a bull considers a playful nudge can break human legs! We do not expect the bulls to be aggressive with humans, but sale day places extraordinary pressure on them as they experience an entirely foreign environment. Remember the quietest bull is in fact an unpredictable animal. Do not crowd the bulls or loiter inside the pens. We cannot cover every example of the dangers of cattle handling, so please use common sense and be alert at all times. Don't enter the pens unnecessarily. If you feel threatened whatsoever, please do not act hardy. The stigma of a person screaming as he dives over a fence is a preferable option to a broken body resulting from "standing up to" an unfamiliar beast.

Please call upon any of the agents for an escort through the bulls if required. The days of bravado with stock have passed under current OH&S legislation.

Understanding the TransTasman Angus Cattle Evaluation (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20

kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

TransTasman Angus Cattle Evaluation - Mid June 2026 Reference Tables

HOW TO REGISTER with

Follow these easy steps to start bidding:

● Visit www.stocklive.com.au using your desktop, laptop, iPad, iPhone or Android device. NO App required.

● Select the **bid** icon beside the sale you wish to bid on.

● If you're new, select **register**, and complete the form with all your details, **accept sale conditions**, select **create bidder registration**.

● You will receive an email from StockLive. Select "**Confirm my bidding account**" to set your password and **accept Bidder Account Terms & Conditions** and **Privacy Policy** followed by **create my account**.

● Congratulations! Your StockLive account has been created and your bid request is pending. You will be notified via email when your request to bid has been approved.

● Existing users, follow steps 1 & 2, select **login**, enter your details followed by the **request to bid** icon beside the sale you wish to bid on and then **accept** the terms.

● On Sale Day, follow steps 1 & 2, select **enter auction** to watch, listen and purchase when the sale is flashing **LIVE**.

● Invoicing and delivery will be carried out as per your registration details by the respective Selling Agents.

Recessive Genetic Conditions

This is information for bull buyers about the recessive genetic conditions, Arthrogyrosis Multiplex (AM), Hydrocephalus (NH), Contractural Arachnodactyly (CA) and Developmental Duplications (DD).

Putting undesirable Genetic Recessive Conditions in perspective

All animals, including humans, carry single copies (alleles) of undesirable or “broken” genes. In single copy form, these undesirable alleles usually cause no harm to the individual.

But when animals carry 2 copies of certain undesirable or “broken” alleles it often results in bad consequences. Advances in genomics have facilitated the development of accurate diagnostic tests to enable the identification and management of numerous undesirable or “broken” genes.

Angus Australia is proactive in providing its members and their clients with relevant tools and information to assist them in the management of known undesirable genes and our members are leading the industry in their use of this technology.

What are AM, NH, CA and DD?

AM, NH, CA and DD are all recessive conditions caused by “broken” alleles within the DNA of individual animals. When a calf inherits 2 copies of the AM or NH alleles their development is so adversely affected that they will be still-born.

In other cases, such as CA and DD, calves carrying 2 copies of the broken allele may reach full-term. In such cases the animal may either appear relatively normal, or show physical symptoms that affect their health and/or performance.

What happens when carriers are mated to other animals?

Carriers, will on average, pass the undesirable allele to a random half (50 %) of their progeny.

When a carrier bull and carrier cow is mated, there is a 25% chance that the resultant calf will inherit two normal alleles, a 50% chance that the mating will result in a carrier (i.e. with just 1 copy of the undesirable allele, and a 25% chance that the calf will inherit two copies of the undesirable gene.

If animals tested free of the undesirable gene are mated to carrier animals the condition will not be expressed at all. All calves will appear normal, but approximately half (50%) could be expected to be carriers.

How is the genetic status of animals reported?

DNA-based diagnostic tests have been developed which

can be used to determine whether an individual animal is either a carrier or free of the alleles resulting in AM, NH, CA or DD.

Angus Australia uses advanced software to calculate the probability of (untested) animals to being carriers of AM, NH, CA or DD. The software uses the test results of any relatives in the calculations and the probabilities may change as new results for additional animals become available.

The genetic status of animals is being reported using five categories:

| | |
|------|--|
| AMF | Tested AM free |
| AMFU | Based on Pedigree AM free - Animal has not been tested |
| AM_% | _% probability the animal is an AM carrier |
| AMC | Tested AM-Carrier |
| AMA | AM-Affected |

For NH, CA and DD, simply replace AM in the above table with NH, CA or DD.

Registration certificates and the Angus Australia web-database display these codes. This information is displayed on the animal details page and can be accessed by conducting an “Database Search” from the Angus Australia website or looking up individual animals listed in a sale catalogue.

Implications for Commercial Producers

Your decision on the importance of the genetic condition status of replacement bulls should depend on the genetics of your cow herd (which bulls you previously used) and whether some female progeny will be retained or sold as breeders.

Most Angus breeders are proactive and transparent in managing known genetic conditions, endeavouring to provide the best information available. The greatest risk to the commercial sector from undesirable genetic recessive conditions comes from unregistered bulls with unknown genetic background. The genetic condition testing that Angus Australia seedstock producers are investing in provides buyers of registered Angus bulls with unmatched quality assurance.

For further information contact Angus Australia (02) 6773 4600.

THANK YOU

As we wrap up our 25th Annual Bull Sale, we'd like to extend a sincere thank you to everyone who helped make the day a success.

To our selling agents, AWN Squires and APL Group, thank you for your ongoing support, advice and professionalism. Your efforts behind the scenes and on sale day help things run smoothly, and your partnership is greatly valued.

Thanks also to our caterers, who we know will do a fantastic job on Sale Day. It's a pleasure to support a local cause, and we're proud that our contribution will go directly towards supporting your important community fundraising efforts.

Most of all, thank you to our clients, friends and supporters. Whether you've been with us since the beginning or have only recently come on board, we're grateful for your trust in our cattle and our program. Your support is what keeps us going, generation after generation.

We're proud to be doing what we love, on country that means a lot to us, with cattle we believe in. Thank you for being part of the journey.
